

# MIG 215 AL SYNERGIC

**PULSED**

**BRAZING**

**Push-Pull**

Its compact, innovative design, low power consumption, reduced dimensions and weight and high efficiency make it a highly useful and versatile professional tool for a wide range of applications in workshops, car body repair shops, on job-sites and in medium-sized production plants.

## MAIN FEATURES

- Exceptionally **good arc stability** at low amp rating.
- Minimised thermal alteration in the welding seam area even when thin parts are welded, especially using **pulse operation**.
- **Complete control** and management of the variables determining the welding conditions with pulsed current, through the control panel.
- Possibility to use the **Push-Pull torch P3KP for welding aluminium with wire of diameters** from 0.6 to 1.0 mm.
- **Possibility to use special wires** as corrosion-proof copper-silicon wire (braze welding) and AlBz8 wire.
- Possibility to be used for **spot welding** by adjusting the working time/idle time with the Intermittent operation function.
- **Wide range of memory stored synergic curves** representing the most common welding operation conditions; new synergic curves can be afterwards added to the power source memory.
- **Synergic operation**, that permits controlling the welding conditions through just one variable, all the others being preset and dependent on this.
- Easy to use interface.
- Easy to learn operation also for less skilled welders.
- Highly professional and customisable by more experienced welders.
- **On request**, a trolley for the transport and a kit allowing the use of 15 kg - 300 mm diameter wire reels are available.

Thanks to **pulse** operation and **inverter** technology, enabling to achieve ideal control of welding variables, this synergic single-phase power source is particularly suitable for MIG MAG welding of materials generally known as "difficult", such as aluminium and galvanised sheet iron, as well as carbon steel and stainless steel. It has a manual/synergic control panel with memory-stored curves and electronic adjustment of arc height and inductance ratings, spot-welding times and idle times, which make it extremely easy to use.
